"ZOMBIFY"
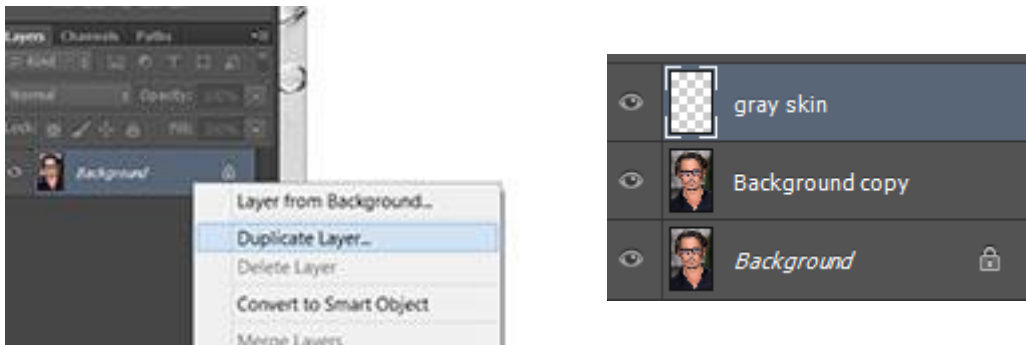

PART1: The Skin
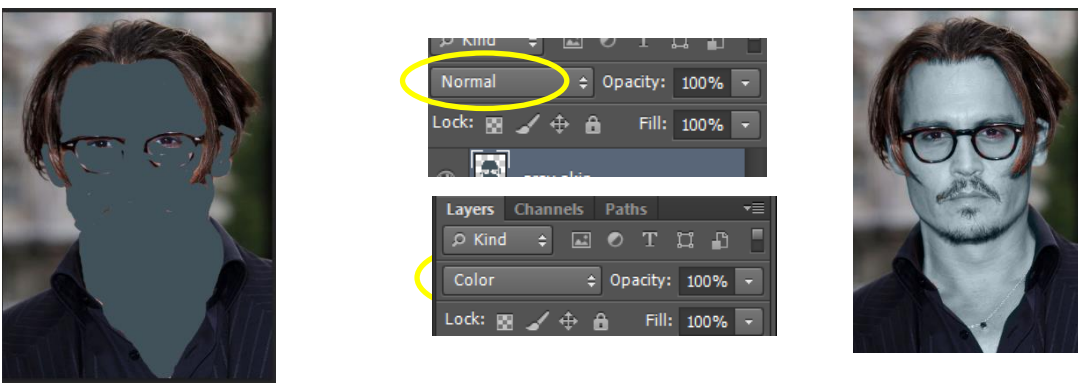

1) Save the picture of Brad Pitt from the exercise folder into your H: → computers 8 → pictures folder

2) Duplicate the background layer

3) ## Create a new layer.
   Call It "gray skin" and select it

4) Use the BRUSH tool and paint over the face with a grey colour

We are going to make this look WAY better by adding changing the "Blend Mode"

5) Above the layers, change the blend mode from NORMAL to COLOUR

6) Lower the OPACITY of this layer until you like the look. Maybe try 75%
7) Select both layers **(hold ctrl)**, **MERGE LAYERS** from Layers Menu to combine the two into one.
8) Duplicate this layer as a backup

> You may also want to add a layer to pale the lips as well.

PART 2: Adding Burns

9) Select the BURN tool (it looks like a hand with the fingers making a circle. Look for it 2 tools above the Text Tool)

10) Use the Burn tool in various areas to add burn marks on the face.
- Darken around the eyes
- Randomly put some marks around the face
- Vary the size and location of the burns

Image search "zombie" to get some ideas of where to put burns.

PART 3: Adjusting the Eyes

11) Create a new Layer called eyes
12) Change to a soft brush and paint over the iris of the eye with either GREY or RED
13) Change the blend mode to either COLOR or PIN LIGHT (or another one you think looks good)
14) Adjust OPACITY to whatever you think looks good
PART 4: Cracking the skin

15) Go online and do an image search for "crackle" (a black and white version will work best)
16) Insert the file overtop your zombie face.

17) Change the blend mode from NORMAL to DARKER COLOR
18) Erase the parts of the cracks you don't want

PART 5: Blood

19) Do an image search for "blood drips" and try to incorporate those for added realism.

PART 6: Extras

Feel free to try other things to make your zombie look even better. A different background, scars, other zombie features. Photoshop is all about trying things out and seeing how it looks! Just remember to use NEW LAYERS
